

Qube

Real-time vehicle location
and activity information

Locate, monitor and manage

A major component of any transport or service business is the need for real-time information on the activities of your vehicle fleet. Accurate information provides the tools for increasing productivity and assists in reducing overtime, fuel and other operating costs.

The Navman solution provides real-time vehicle location for transport and service fleets, trailer units, plant or any mobile unit that requires monitoring. The information provided consists of accurate start and stop times, time spent on sites, customer visits, the route taken, distance travelled and much more...

Regardless of whether you operate a large or small fleet, access to this important data will increase your competitive edge.

Qube

Locate, monitor and manage

The extremely powerful Qube location device enables you to achieve higher productivity by having total visibility of your business operations. Whatever your industry or the size of your fleet, Navman offers you affordable, real-time productivity.

"We took the road to improved efficiency."

"Our customers need to know when they can expect their consignments to be delivered, and with the Navman Wireless system, we can give them an accurate update on exactly where the truck is and what time it will arrive.

Before this, we would have to telephone the drivers, who would tell us roughly where they were and give us an estimated time of arrival. They could be held up in traffic, or have to follow a diversion, and we would then have to call again to find out where they were.

Now we can look at the screen and see exactly where they are at any one time and tell our customers. We no longer have to guess. Both mobile communications and landline costs have been reduced."

Ray Halford
Prima Distribution Services

The Navman Qube is a low profile vehicle mounted satellite tracking device with various covert and low profile antenna options to suit every vehicle requirement.

Accurate information provides a clearer picture

The Qube location device provides:

- Real-time GPS location
- Compact, solid, all-in-one unit
- Easy installation
- Automatic time/distance activity updates and independent location queries
- Location, speed, direction, stops, entry/exit to specific areas
- Time, date, ignition and battery on/off events

The Qube location device will benefit your business

- Maintain better cost control
- Monitor the activities of all vehicles
- Increase productivity
- Improve customer service
- Obtain accurate exception reports
- and much more...

The Qube allows connectivity into mobile data devices such as the MDT-850, Mobile Data Terminal, which provides better, faster, cheaper two-way text messaging, allowing fast and dependable communication with your fleet.
